

PINTEREST INSPIRED WEBSITES

THERE ARE A MYRIAD OF REASONS WE LOVE PINTEREST...

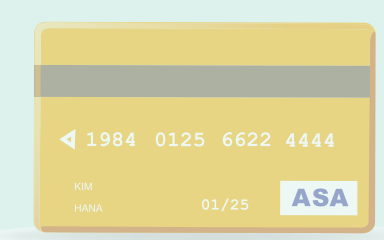

...but don't let that love stop there. There are a ton of sites like Pinterest with their own audience, own community, their own images. Why not leverage your images and move them all over the web. Some of these sites you can use automation rules to get your content there. You can check **IFTTT** to see if they distribute there. I'd also look for plugins that might help you. But the bottom line is, why would you not extend your brand to those sites?
